Welcome to IBM® Lotus® Notes® Traveler 8.5.2

A new version of **IBM Lotus Notes Traveler 8.5.2** is coming to your mobile device. Take a look at what's in store!

What's new...

for all supported devices	User managed security With user managed security, users can now remotely wipe or lock their own devices, without the help of an administrator. They can also clear their own actions. For example, they can cancel wipe requests and re-enable server access for a device that was previously locked. To perform these actions, open the Lotus Notes Traveler User Home Page from your device and select the Manage Security section.
for Apple devices	 Support for Meeting Invitations on Apple devices Invitation notices can now be processed on Apple devices. Users invited to meetings can accept, tentatively accept or decline meeting notices right from their mobile device. Support is also included for users to create meetings on the device with attendees, and to reschedule, update or cancel meetings from the Apple device. To respond to a meeting invitation using Lotus Notes Traveler: 1. In your Inbox, open the meeting invitation. Press the Invitation icon within the email's Body. 2. Optionally, press Add Comments to include remarks in the reply. 3. Select either Accept, Maybe or Decline.
for Nokia and Windows Mobile devices	 Corporate Name Lookup You can now search for users in your corporate directory and display information such as phone numbers and e-mail addresses. To search for a contact using corporate look up: Start the Traveler Lookup application. Enter the first few characters of the contact's first or last name. The Results window populates a list of names with similar characters. Select the appropriate name from the list. Once the contact displays, you can call, e-mail or add the contact to your local contacts list. You can also search your corporate directory while composing a new email and add recipients directly to your new mail message address fields. Scheduled Synchronization Lotus Notes Traveler users on Windows Mobile and Nokia S60 devices can now define a synchronization schedule for peak and off peak times. On the device, open the Lotus Notes Traveler client application, then access the Settings display. Select the settings for Auto Sync, and then select Schedule. You can set the behavior for two time periods; a peak time

schedule and an off peak schedule. The sync behavior can be any of the following:
 Always Connected Manual Every 15 minutes
 Every 30 minutes Every hour Every 2 hours
Automatic Lotus Notes Traveler client updates A new installer application called Lotus Mobile Installer now helps you to install the Lotus Notes Traveler client software. It can also be configured to periodically check with the server for any updates to the client software. If updates are detected, the device user is prompted to download and install the latest updates.
 To get the Lotus Mobile Installer application: Turn on your mobile device. Launch the device's browser. Go to the Lotus Notes Traveler user home page Select Download Lotus Mobile Installer. Transfer the file to your mobile device and open the file. When the installation is complete, the Lotus Mobile Installer starts.
