

Setup TDI/Connections 4.5 Development Environment on Linux and import photos from LDAP Server to Connections Profiles

1 – Setup TDI

This [article](#) show how to install the TDI 7.1 on Linux RedHat.

Instead of fixpack 5, i installed the fixpack 6 with the same steps.

My Connections server is 4.5 and running on Centos 6.3 using DB2 as RDBMS and ITDS 6.3 as LDAP Server .

2 – Setup the development environment

Create a folder called TDISOL. I create bellow the /opt/IBM. My TDI was installed on /opt/IBM/TDI.

Copy the tdisol.tar into TDISOL folder and extract the content using `tar -xvf tdisol.tar`

Go to /opt/ibm/TDISOL/TDI and edit the file profiles_tdi.properties and update the following lines according your environment:

```
source_ldap_url=ldap://<ldapservers>:389
```

```
source_ldap_user_login=<binduser>
```

```
source_ldap_search_base=<search base> ex: dc=acme,dc=com
```

```
dbrepos_jdbc_url=jdbc:db2://<db2hostname>:50000/peopledb
```

```
dbrepos_jdbc_driver=com.ibm.db2.jcc.DB2Driver
```

```
dbrepos_username=lcuser
```

```
dbrepos_password=<password>
```

I got some erros when i start the TDI configuration editor.

Check the solution.properties file and verify the value of api.remote.naming.port .

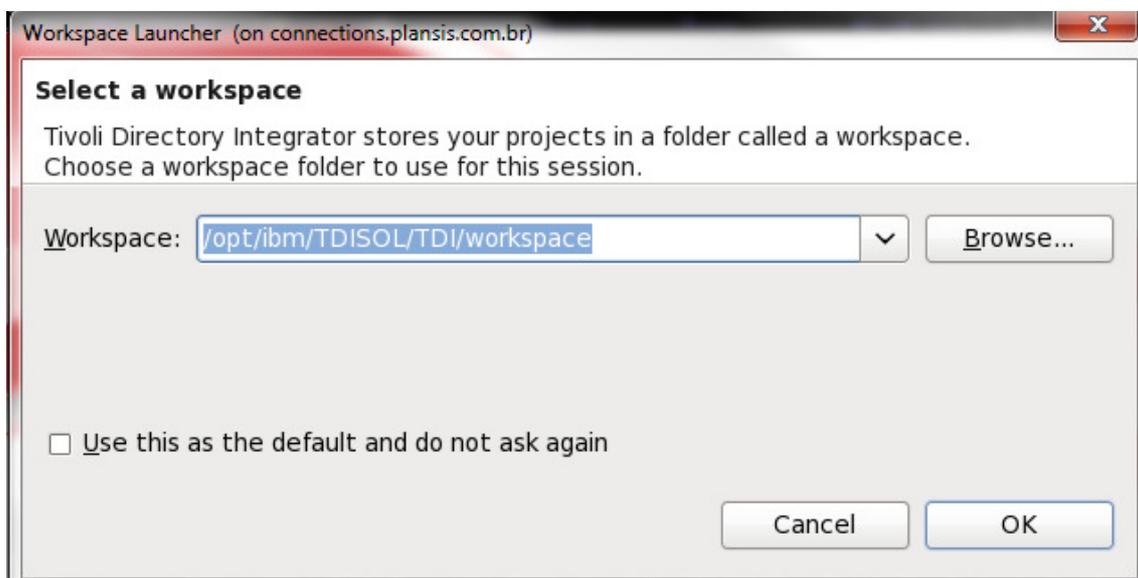

The value must be the TDI Server port. The default is 1099.

3 – Start the configuration editor

Go to TDI Server folder `/opt/IBM/TDI/V7.1` and type

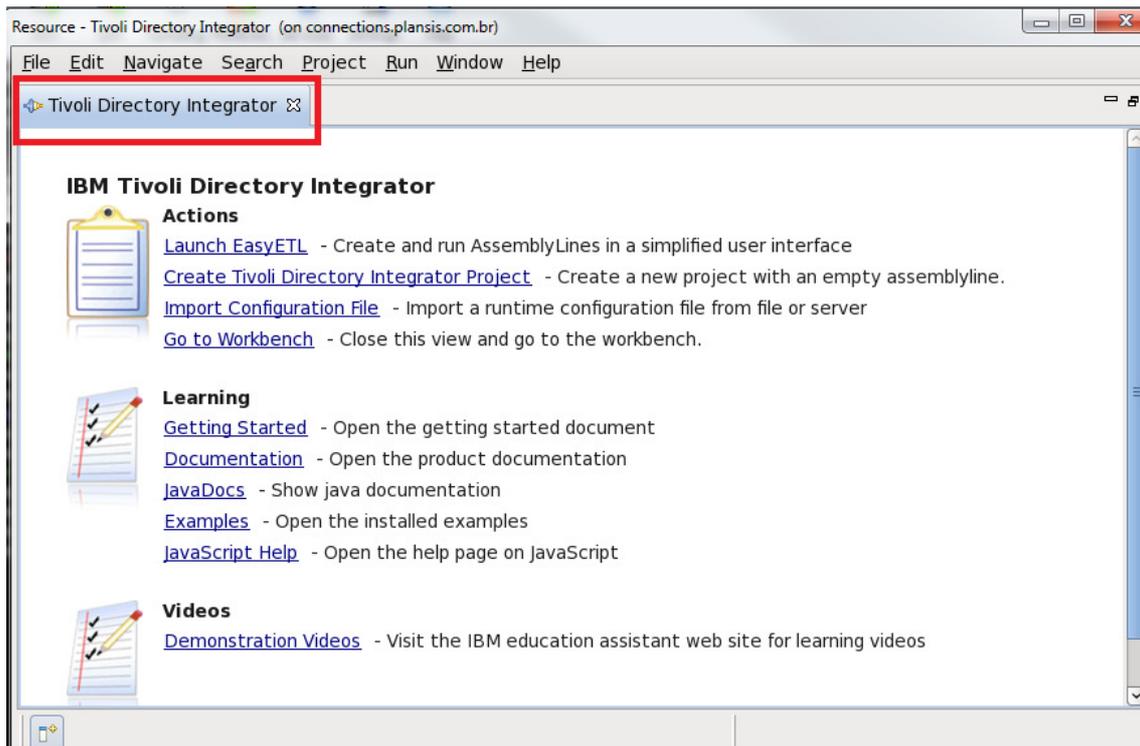

```
./ibmditk -s /opt/IBM/TDISOL/TDI
```

You need to create the workspace. Create the workspace below the `/TDISOL/TDI/`

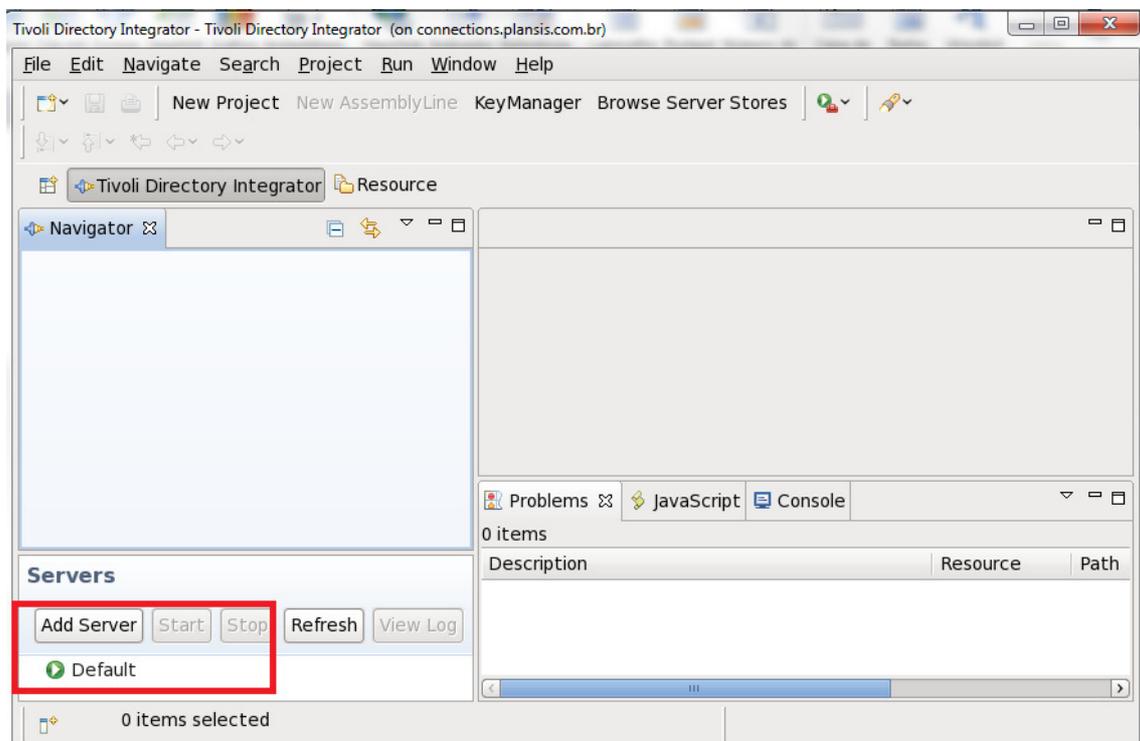

are registered trademarks of IBM Corporation in the United States, other countries, or both. Built on Eclipse is a trademark of Eclipse Foundation, Inc. Java and all Java-based trademarks are trademarks of Sun Microsystems, Inc. in the United States, other countries, or both. Other company, product, or service names may be trademarks or service marks of others.

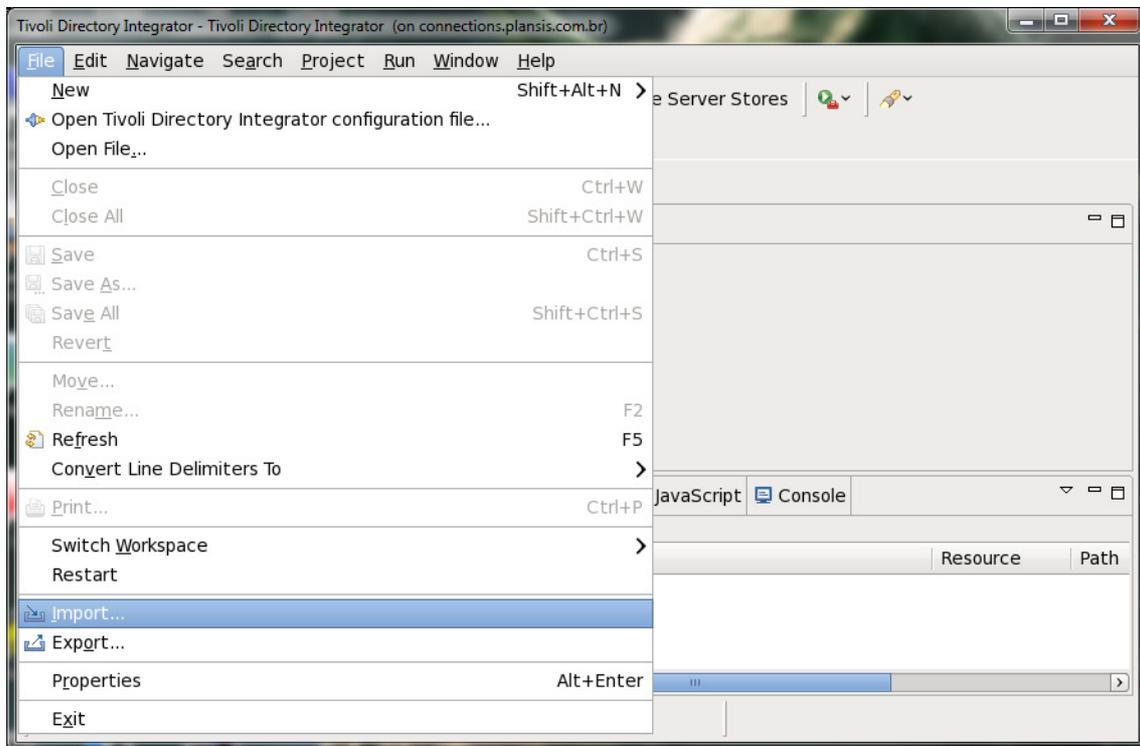

Close this window and start your project

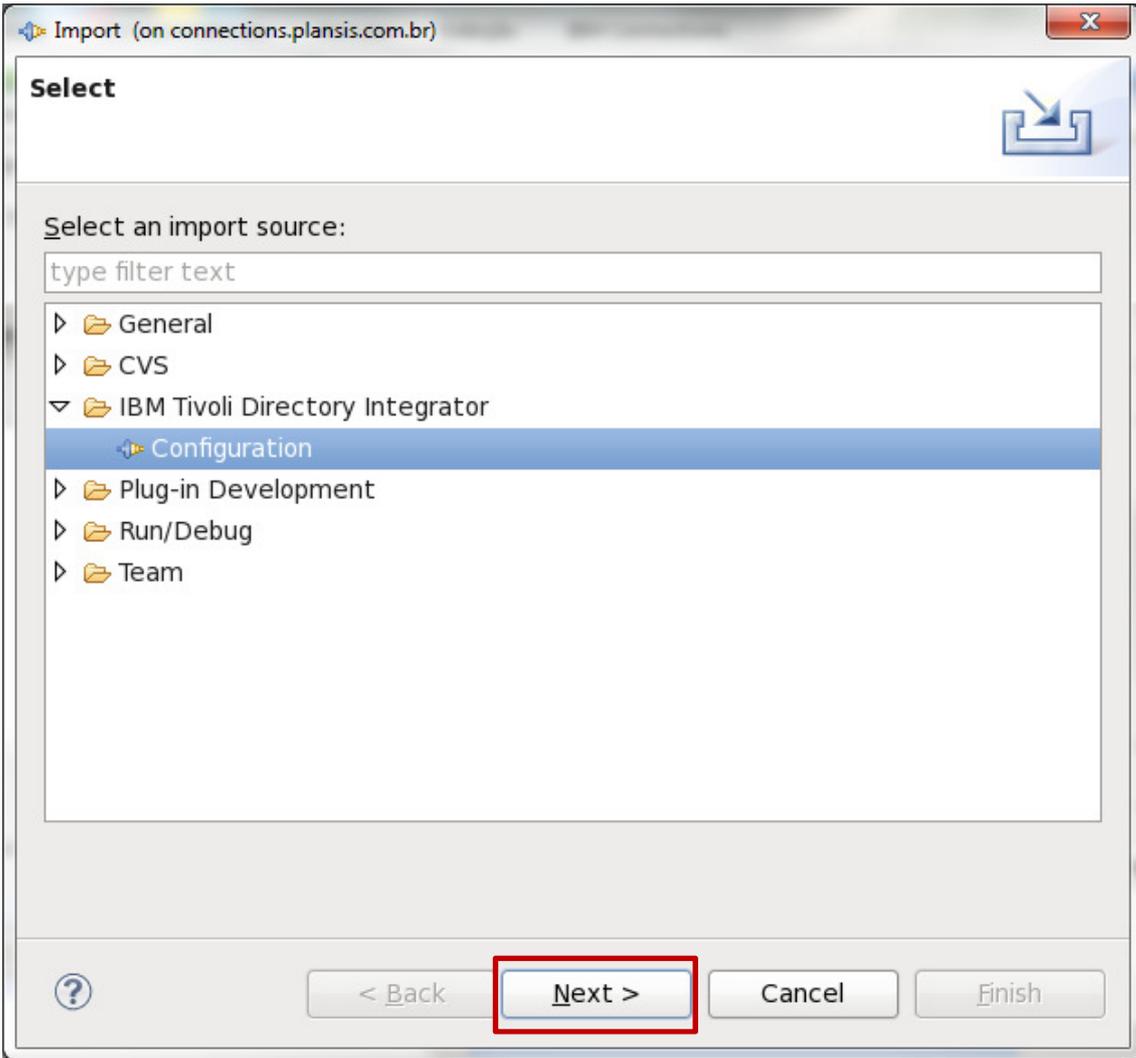

Warning! You must see your default server started!

Import the configuration. This configuration has the Assembly lines and resources to work with the Connections .

Import Tivoli Directory Integrator configuration (on connections.plansis.com.br) X

Select objects to import

Dependencies will be automatically imported (import will NOT overwrite existing files)

Project: ↕

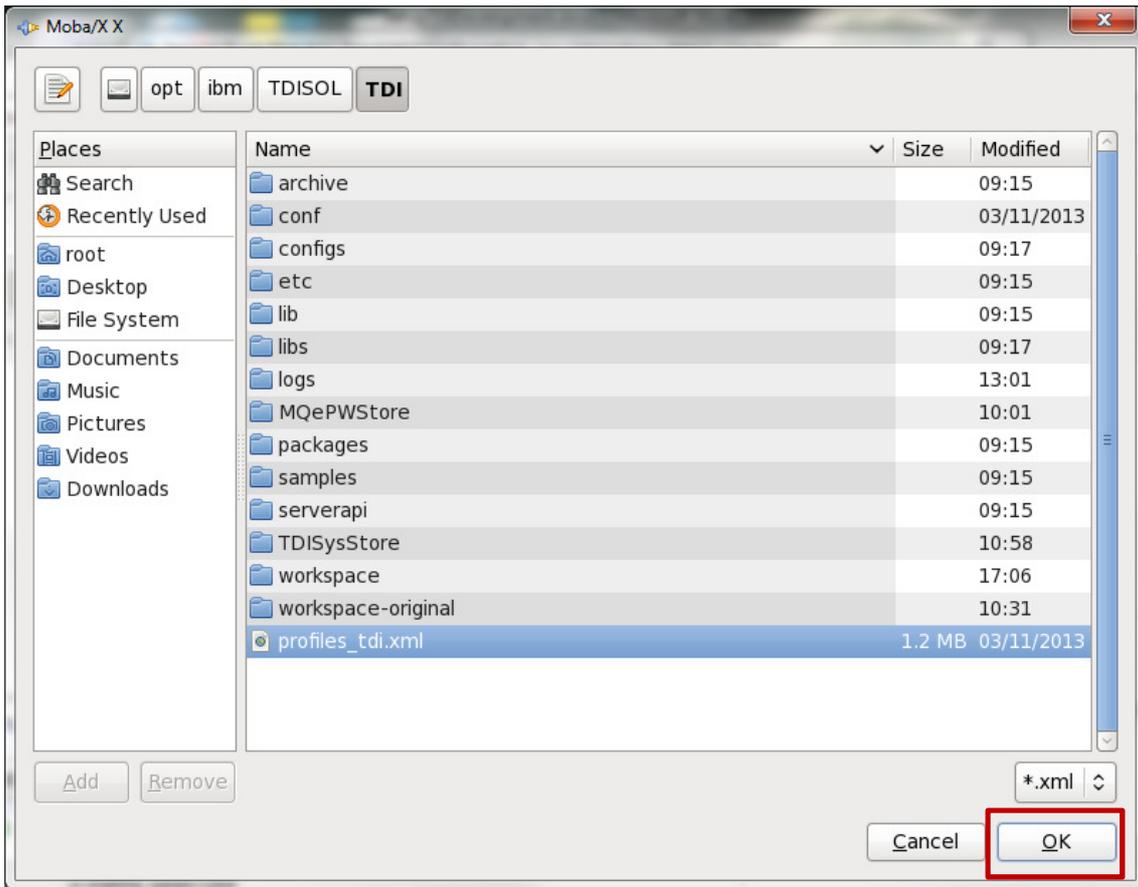

Server File

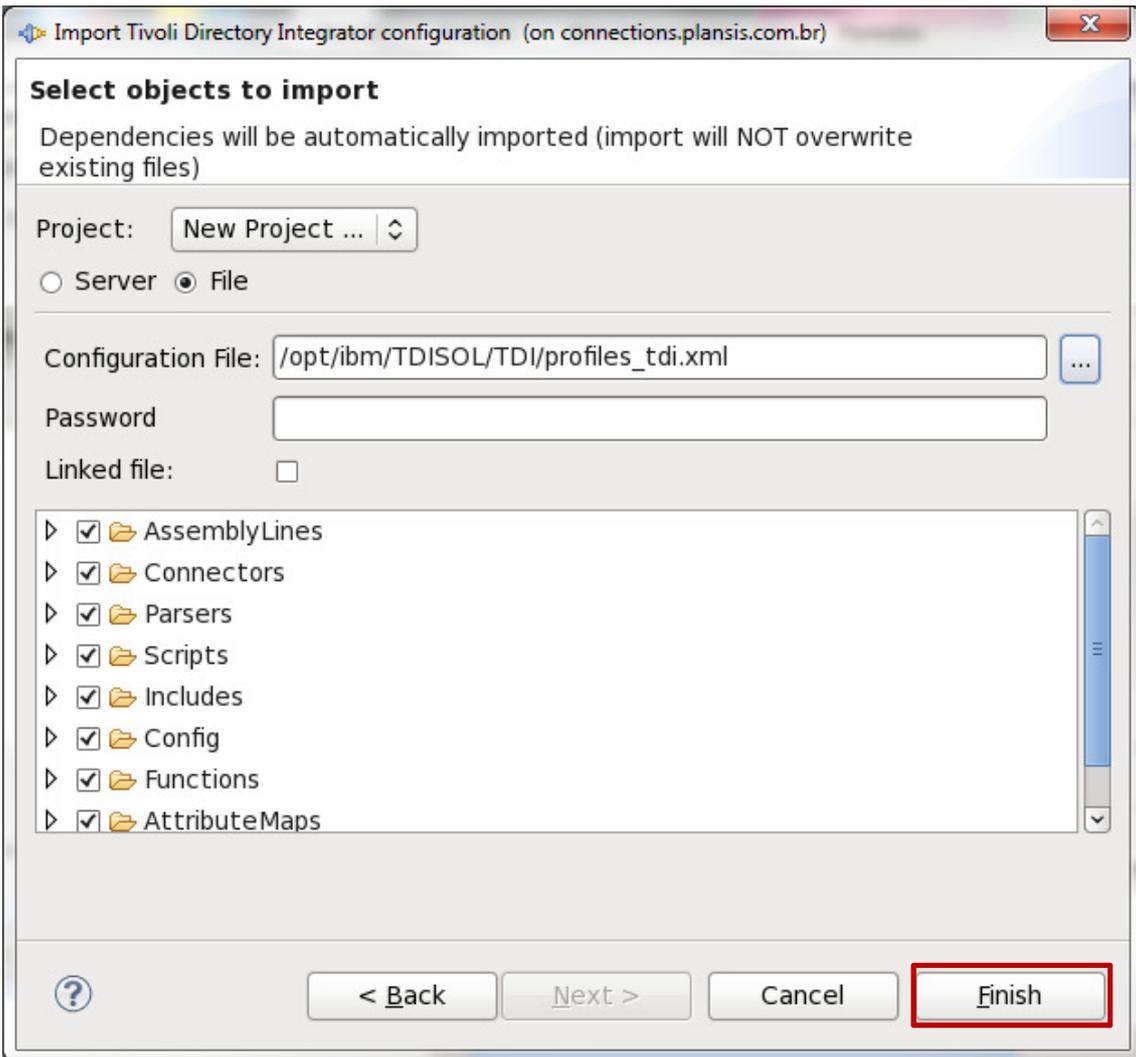

Configuration File: ...

Password:

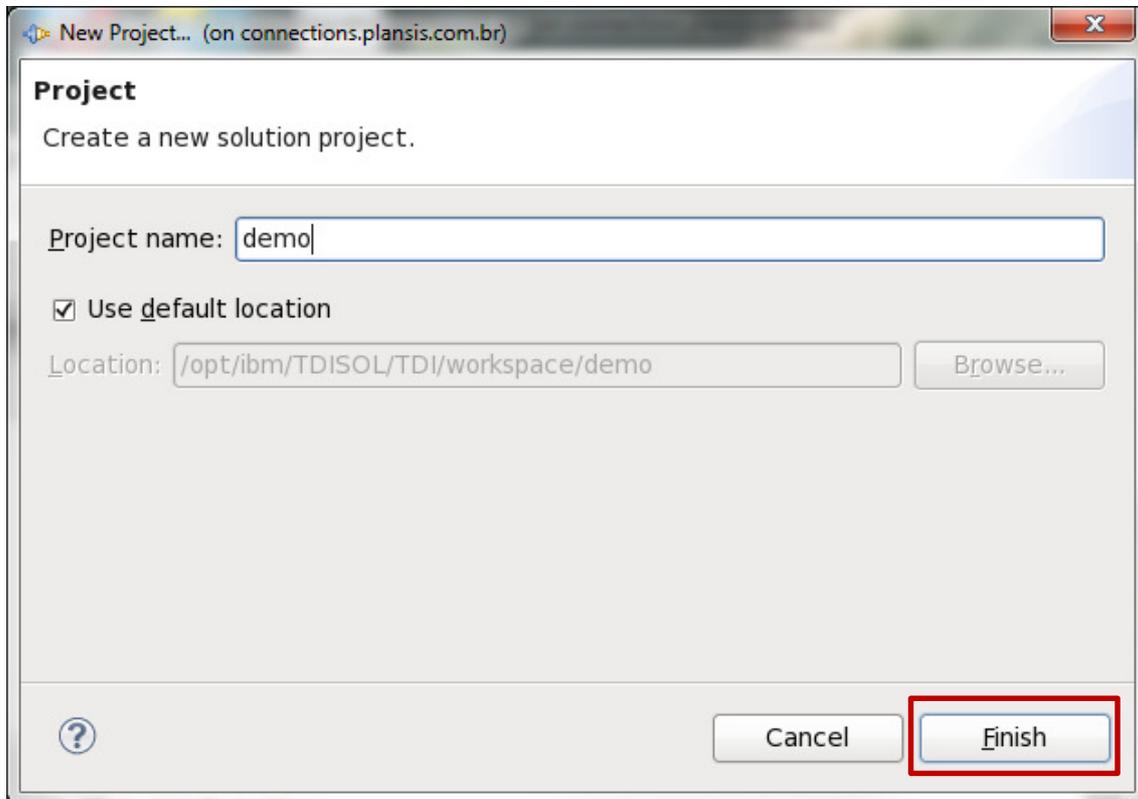

Linked file:

?

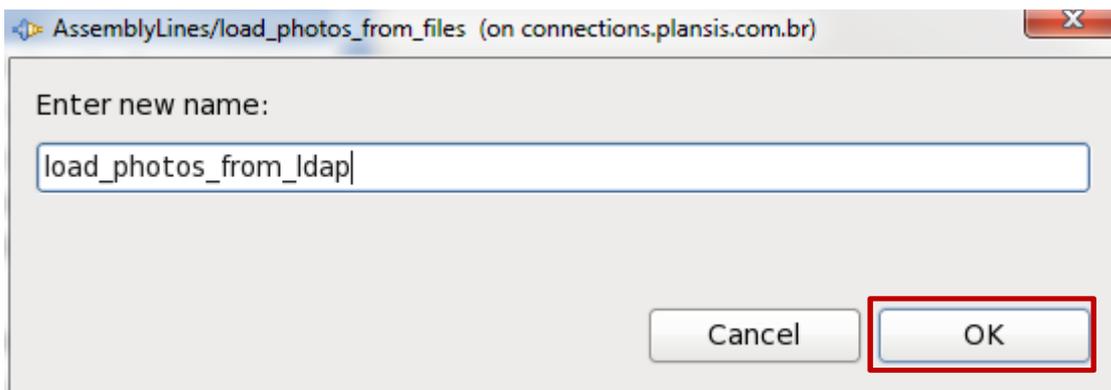

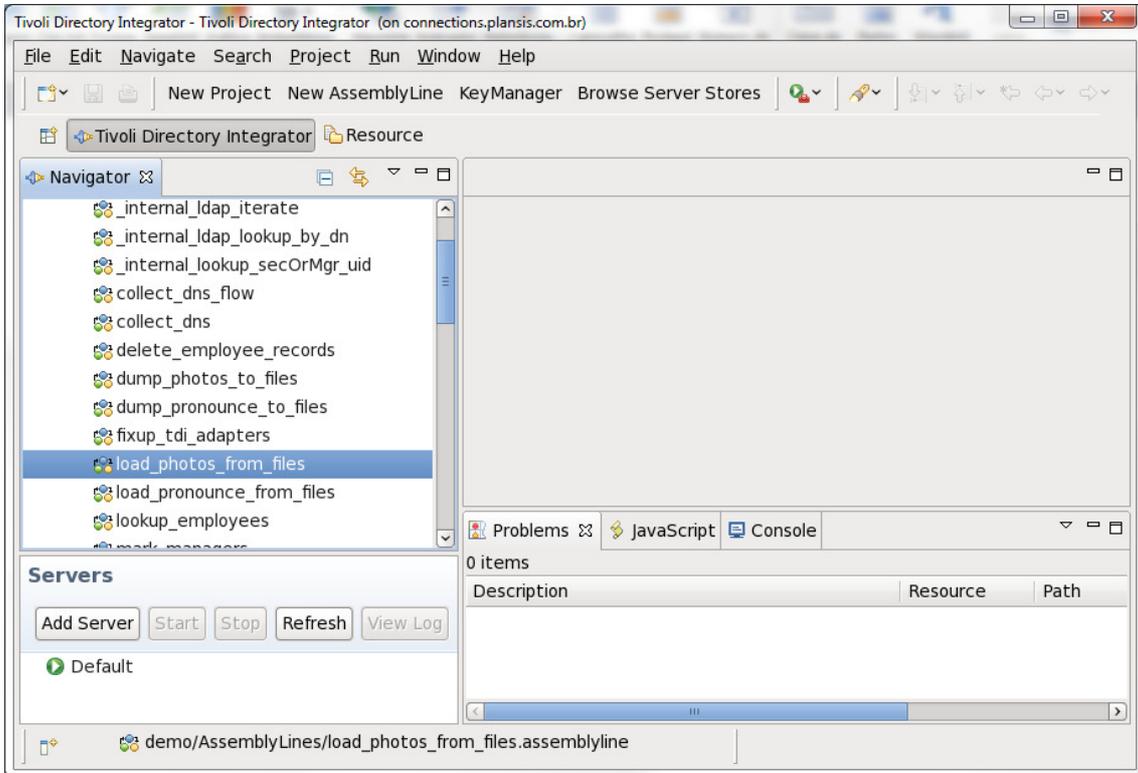

Enter the project name and then finish

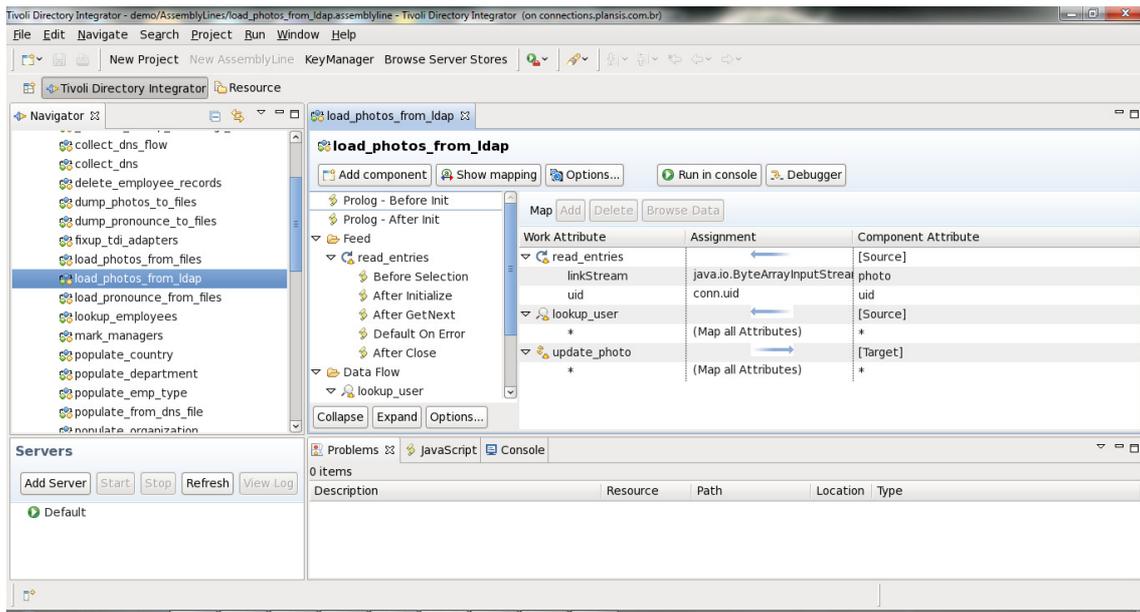

Expand the project name and assembly lines and search for load_photos_from_files.

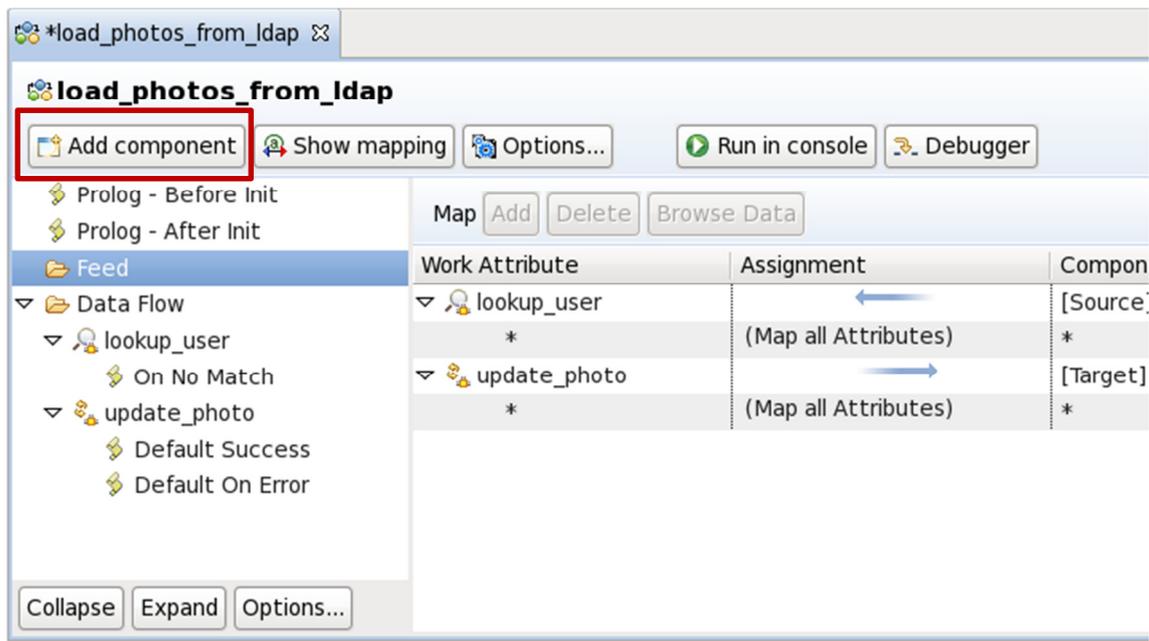

Use the right click to copy and then paste the assembly line

Click on the assembly line to edit

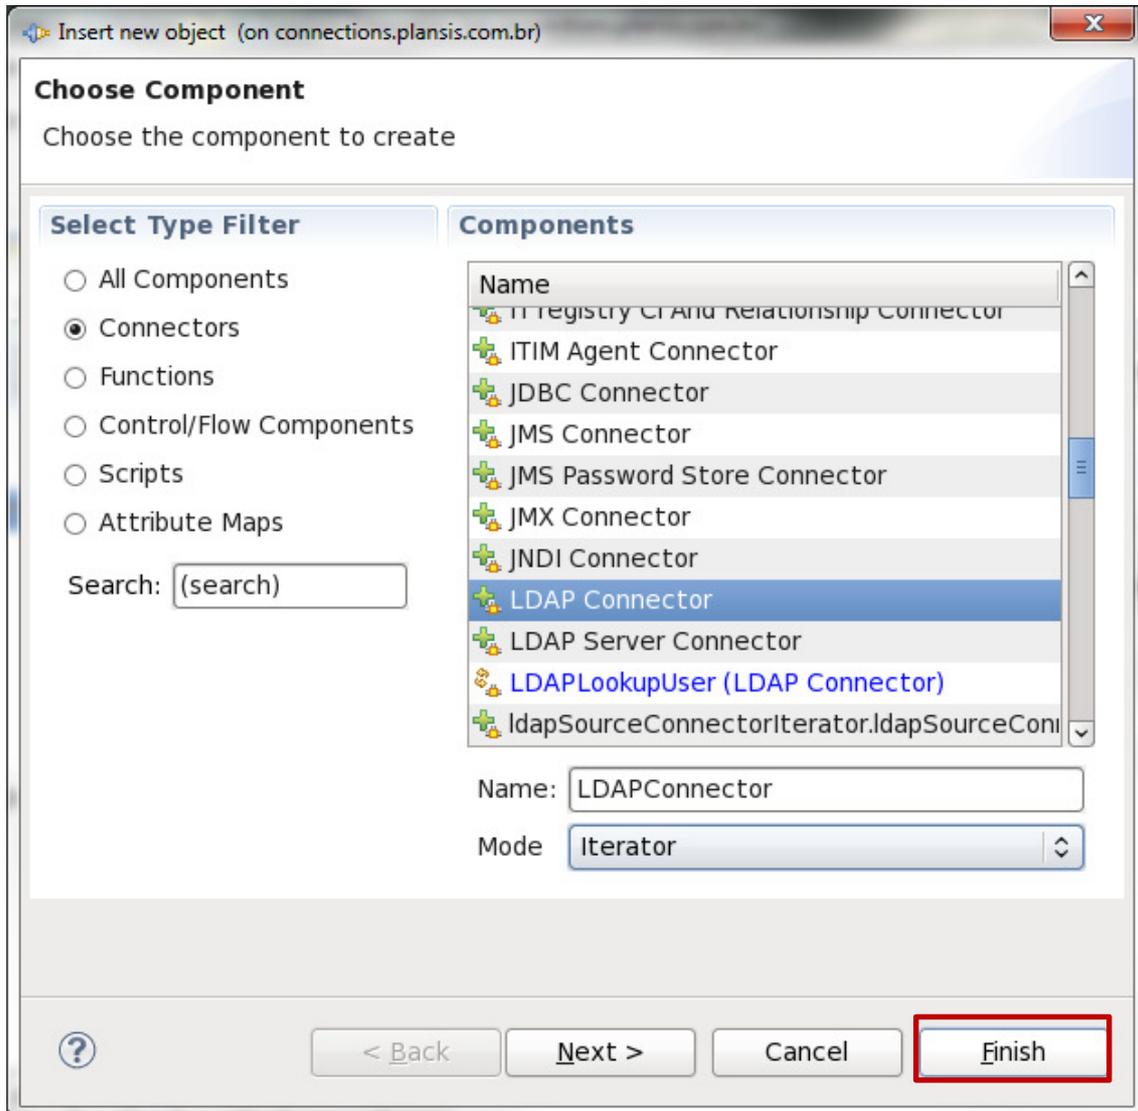

Delete the connector named read_entries. Select feed and click on Add component

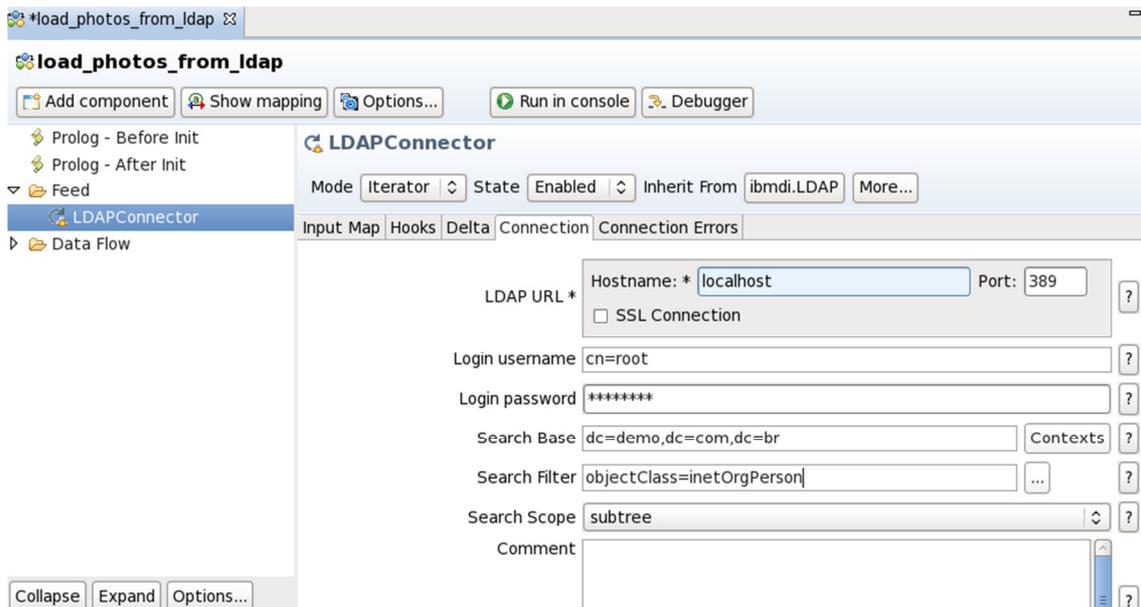

Select Connectos, search for LDAP Connector and set the mode to Iterator.

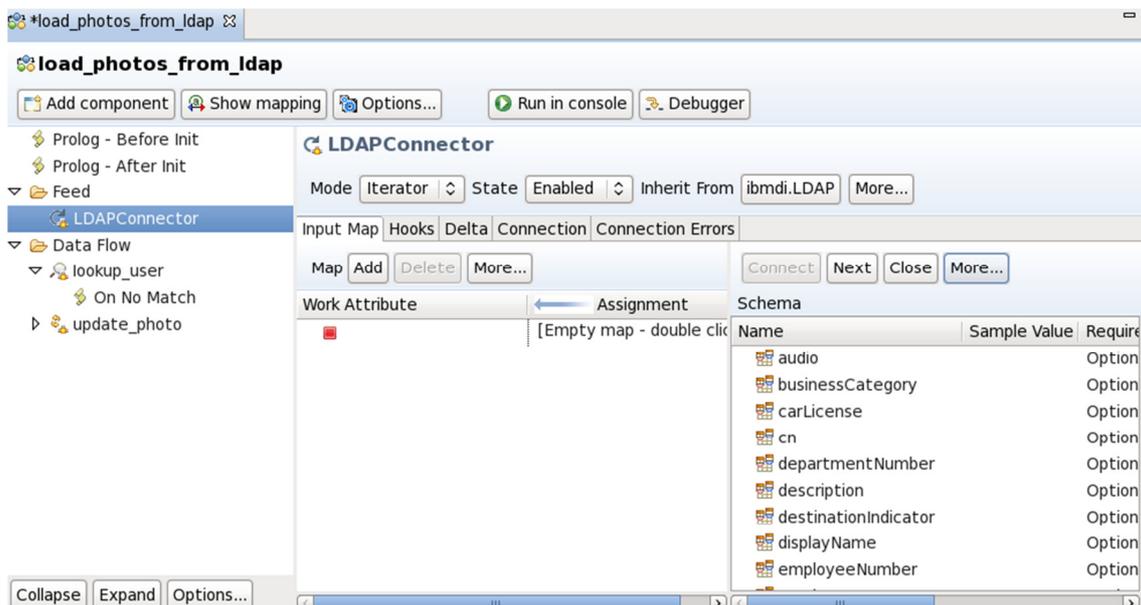

Click on finish

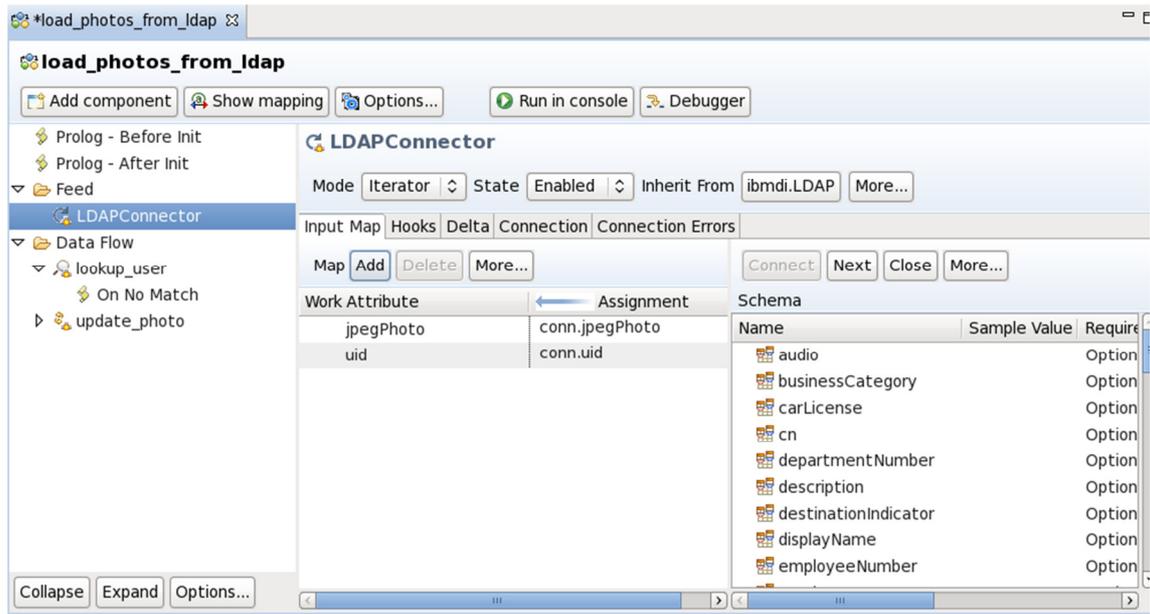

Select the LDAP Connector and click the connection button. You need to set the fields according to your environment

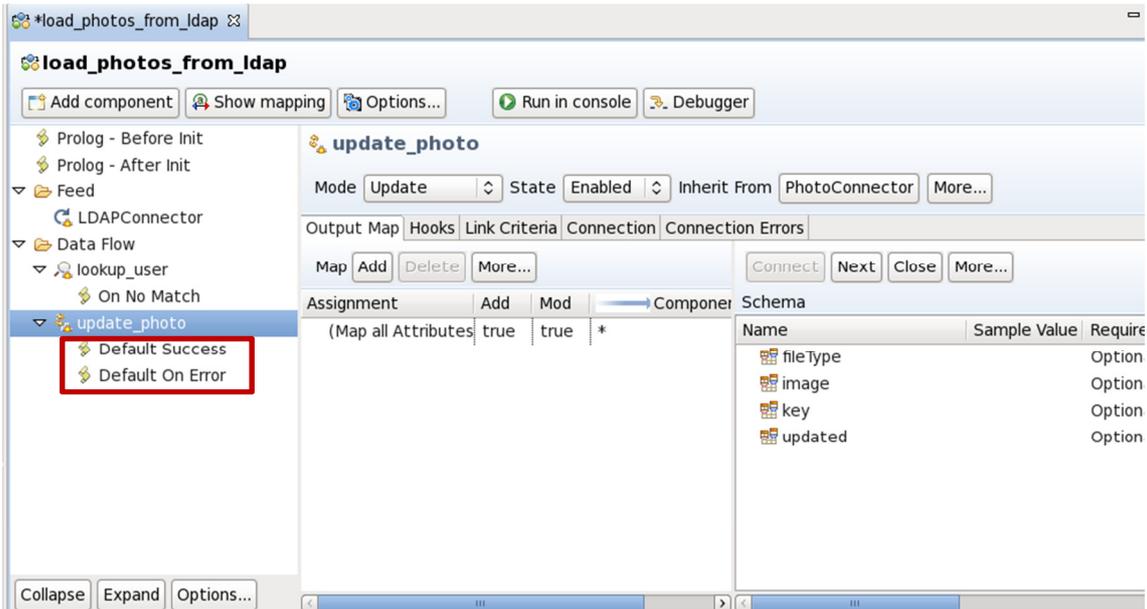

Click on Input Map and then connect button and see if you can connect to your ldap server

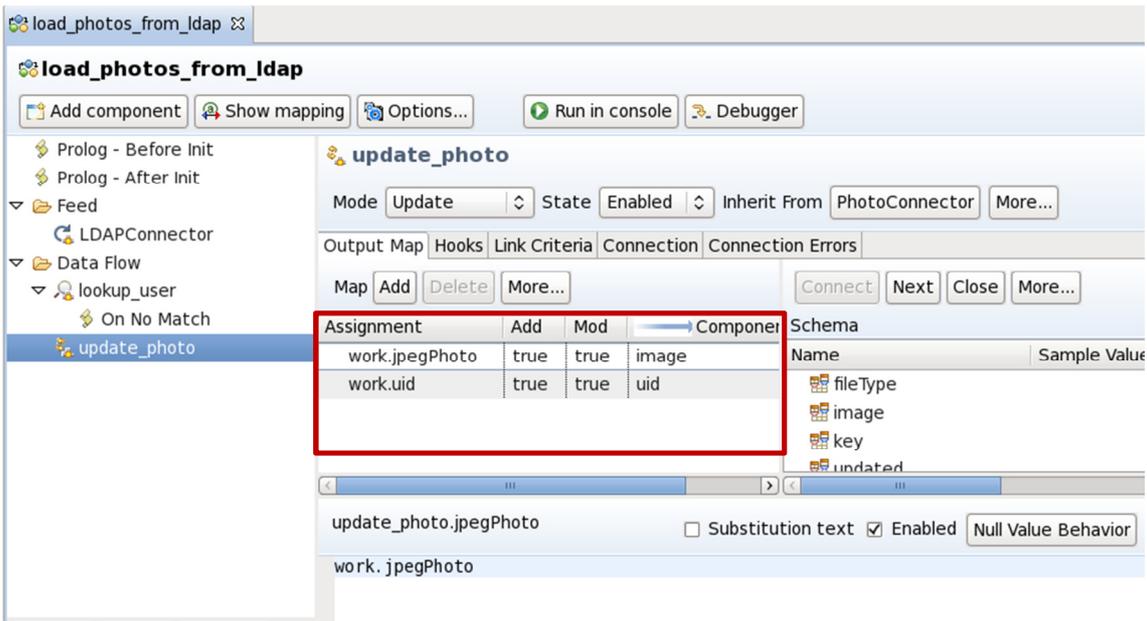

Click Add button to map attributes. I mapped uid and jpegPhoto

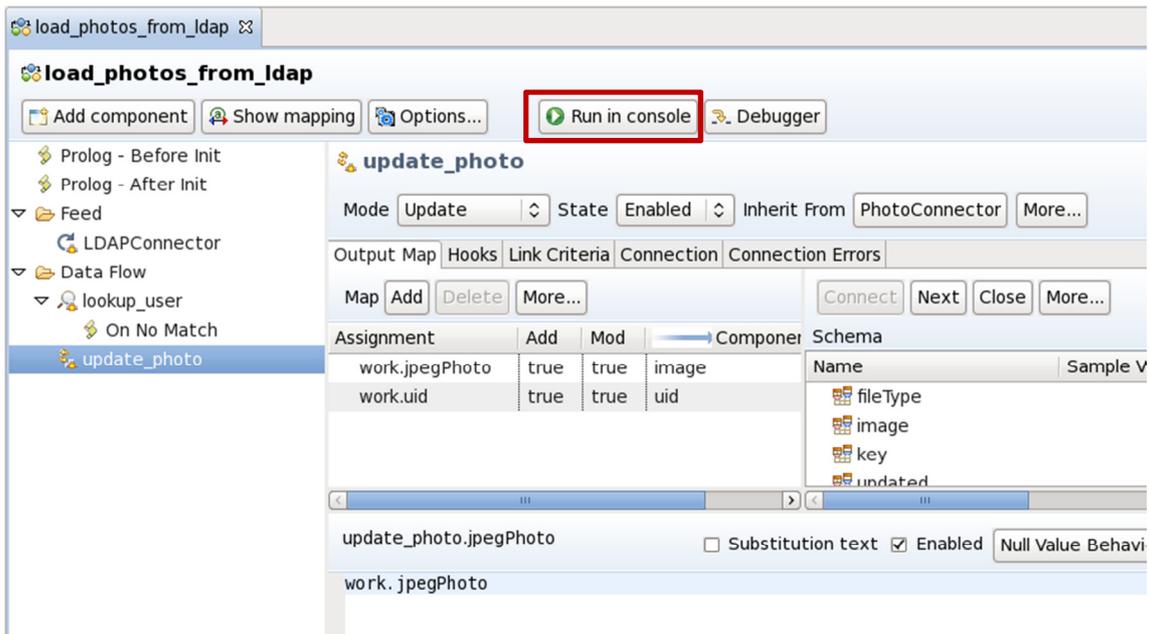

Delete the scripts Default Success and Default On Error

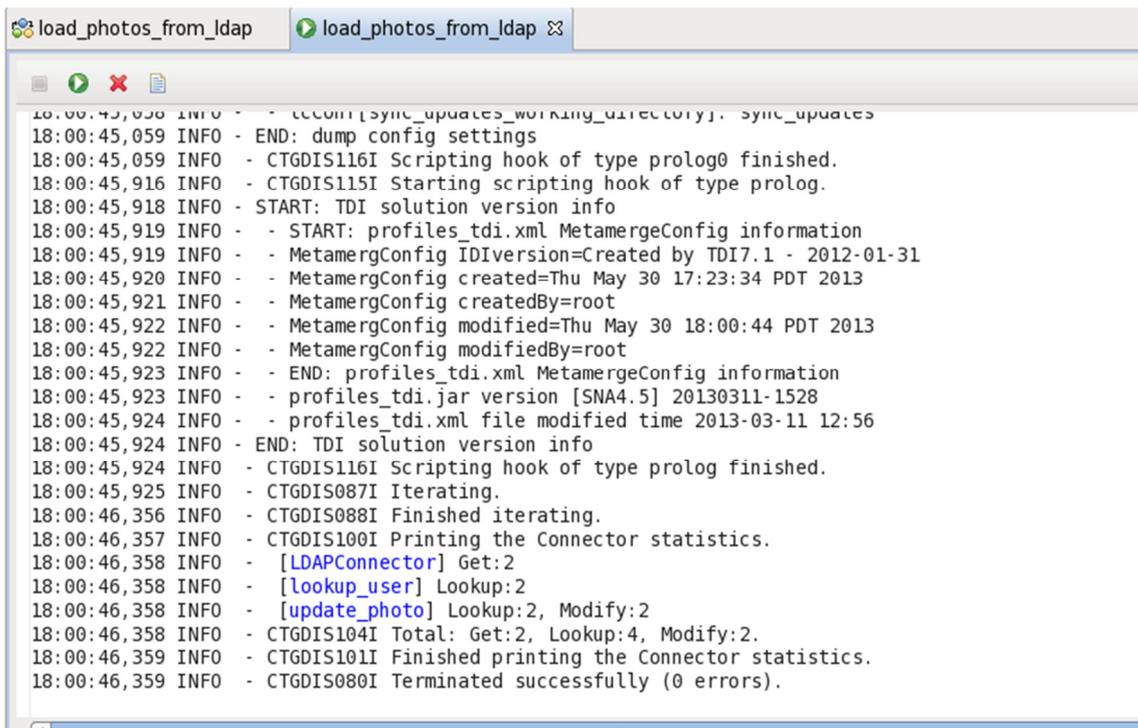

Click on update_photo and map uid and jpegPhoto

Click Run in console button

Check for errors on the console

Go to Connections and verify the profiles.
